SAKAYPH

Turning Commuter Searches into Better Public Transportation Decisions

Eunice Joanne G. Macasa
Grant Ivan L. Sartiga
Tyra denise L. Ventura

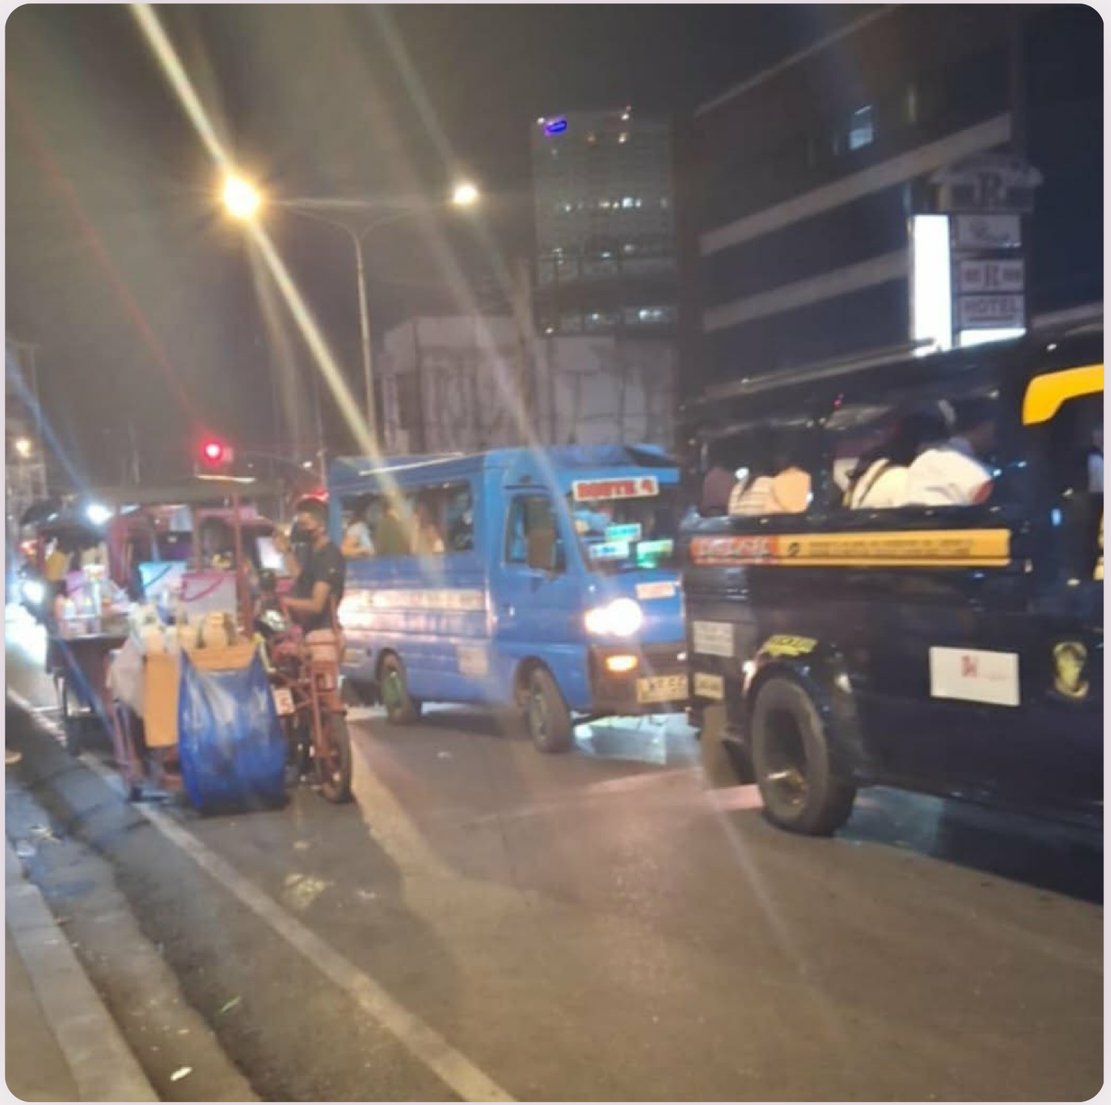
Bachelor of science in Computer Engineering

THE PROBLEM

- Commuters experience long and unpredictable waiting times.
- Jeepneys may become overcrowded during peak hours.
- Local government lacks continuous route-level demand data.
- Current methods such as surveys and manual monitoring are slow and occasional.

Key Data

95.9% demand improvements in transportation.



MARKET & OPPORTUNITY

Who Needs It?

Primary Customer:
Local Government Transportation Authorities

Secondary Users:
Students & Daily Commuters

Market Opportunity

TAM: ₱985M/year
SAM: ₱89.4M/year
SOM: ₱18M/year
Starting Market: Davao City

SOLUTION & PRODUCT

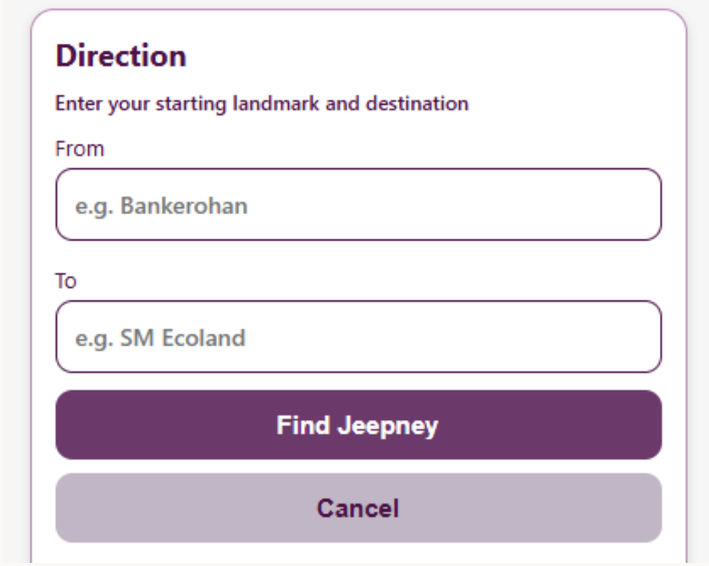
A responsive web platform that turns commuter route searches into near-real-time transportation demand data.

For Commuters

Search routes

Check fares

View demand levels

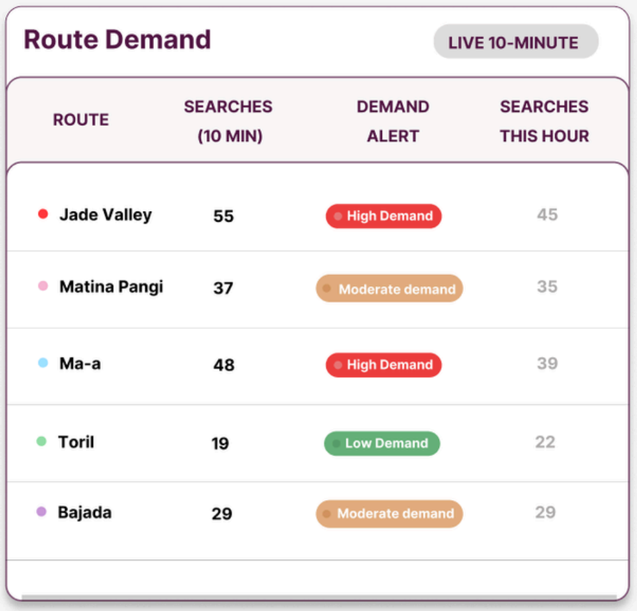


For Government

View route demand

Identify high-demand areas

Support transportation planning



HOW IT WORKS

Commuter searches for a route.

Search activity is collected.

SakayPH identifies demand levels.

🟢 Low | 🟡 Moderate | 🔴 High

Government uses the data for transportation decisions.

COMPETITION

What Makes SakayPH Different?

- Traditional jeepney coverage
- Transportation Demand data
- No GPS hardware required

Compared with

- Manual CTTMO surveys
- DC Bus Live Tracker
- Commuter complaints
- Other transportation apps

Main selling point

Government transportation demand data without requiring GPS hardware on traditional jeepneys.

How Can SakayPH Earn?

SaaS — Software as a Service

Local government authorities pay for access to the platform and transportation demand dashboard.

License Assumption:

- ₱600,000 / city / year

Expansion

Davao City → Other Cities & Municipalities
